Solution for Vaccine certification
IQ-VAX Cert

WildFaces.ai
wildAI On-The-Move

International Vaccination Certificate
can be used to verify if a person has been vaccinated.

Contactless Verification

No Database Required

Full Privacy Protected
(Zero Risk of Data Breaches)

Fraud Protected
(Zero Risk of Fraud)

Globally Supported
(Can Operate Internationally)

Minimal Infrastructure
(Low Computing/Network/Storage)

Flexible Usage
(From Airline Boarding to Restaurant Check In)

Internationally Patented
(From the World's Leading Supplier of AI based Analytics)

How It Works?

1. A small app is put on a person's phone when he/she is vaccinated (with his encrypted personal biometric metadata).

2. For verification: When their phone connects to a local wireless network, the verifier can extract the meta-data and check it against a live image that can be obtained from the verifier s smart phone or from a CCTV system.

Works in a Crowd

In a crowded scene such as an airport, the system can check a large group of people simultaneously to verify if they have been vaccinated as they walk past a camera.
